1. Introduction

The IPS Operator has the possibility to determine which reports are accessible to each user profile. Users can only see their Participant's data.

In terms of reporting messages and transactions:

- IPS and Proxy: Direct settlement participants will not be able to see indirect settlement participants messages/transactions.
- IPS: Direct clearing participants will see their indirect clearing participants messages/transactions. Indirect clearing participants will only see their own messages/transactions. If the indirect clearing participant moves to another direct clearing participant, the indirect clearing participant will see their own old messages/transactions, but the new direct clearing participant will only see the messages/transactions made after the switch.

All reports generated in the IPS solution can be downloaded in PDF, XLS or CSV, and XML format.

Reports automatically generated by the IPS are also sent by email to the address configured in the Participant profile.

The standard Montran IPS reports (sent via email) include the following:

- Reconciliation report
- Connectivity report
- Prefunding report
- Manual funding report
- Billing report (Daily Bill and Billing Invoice)

The reports customized for NBG include the following:

- Balance Report
- Proxy reports
- DMS reports

1.1. Reconciliation Report

Name	Reconciliation Report
------	-----------------------

Description	This report will contain the total number of payment messages processed by the IPS on a calendar day, structured per Participant, message type, status of
-------------	---

	the transaction, total value and total number of messages sent and received. This report also contains intermediary statuses (i.e., it will display HOLD for transactions which are not completed at the moment of report generation). Reserved amounts for inflight transactions are displayed as separate rows (if they exist at the moment of report generation) marked by status HOLD. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	Automatically, at the end of the banking day. On demand
Filters	Date. Participants (BIC).
Displayed details	• Sender / Beneficiary Participant (BIC) • Message Type • Transaction/message Status • Outgoing message → Count → Amount • Incoming messages → Count → Amount • Net position.

1.2. Processing Exceptions Report

Name **Processing Exceptions Report**

Description	This report will contain information about rejected transactions and messages for each participant, with a breakdown by error code, amount, count, and totals. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
-------------	---

Generation	On demand.
Filters	Time interval. Participant
Displayed details	- Participant name (BIC) - Message Type (transaction or other message type) - Error code - Amount - Count - Total (amount count)

1.3. Users Operations Audit Report

Name **Operations Audit Report**

Description	Allows monitoring of IPS and Proxy activity throughout the day. To view the report, use the date and Participant (BIC) filters. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	Automatically, at the end of the banking day. On demand.
Filters	Time interval. Participant. (BIC) Username
Displayed details	- Username - Group - Workflow name - Function - Operation

- IP address
- Start date and time
- Execution time.

2. Financial Reports

2.1. Daily Bill Report

Name	Billing Report
------	----------------

Description	This is a daily report generated by the system that shows the fee summary for each participant's activity. The report displays a sub section for each participant with the following information: rate name (which was created by the operator from the Billing menu), transaction type, unit charge (rate value for one unit), quantity, value. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information. In the case of interchange rates being defined in the system then an additional set of reports is generated (one for operator and an individual report for each participant) with the calculated amounts for interchange rates. For each participant that is billed according to an interchange rate, the total amount that they must pay to other participants is displayed in the reports (one row for each counterparty) - bilateral netting. Billing for participant types: • IPS: → Direct settlement, indirect settlement participants – billed according to rate configuration → Direct clearing – if rate filters for transactions, then it will be billed only for own transactions; if rate filters for messages, then it will be billed for all messages → Indirect clearing – if rate filters for transactions, then it will be billed separately from direct for own transactions • Proxy: → Direct settlement, indirect settlement participants – billed according to rate configuration Report visualization based on participant types: • IPS:
-------------	---

	→ Direct settlement participants – see owned reports with details about their data and see indirect settlement participant reports as well → Indirect settlement participants – see owned reports with their data only → Direct clearing participants – see owned reports with data filtered according to description above → Indirect clearing participants – see owned reports with their data only • Proxy: → Direct settlement participants – see owned reports with details about their data and see indirect settlement participant reports as well → Indirect settlement participants – see owned reports with their data only
Generation	Automatically, at the end of the banking day
Filters	Participant, Business Day
Displayed details	• Rate name • Participant Name and BIC • Transaction/Message type (If the rate targets messages then the message type is displayed; if the rate targets transactions then the message type of the initial message is displayed, for example pacs.008 for Instant Credit Transfer.) • Unit charge • Quantity (billed count) • Value (based on unit charge and quantity) • Premium • Charge (total billed amount for a specific rate) • Total amount per day

2.2. Billing Invoice Report

Name **Billing Invoice Report**

Description	This is an automatic report generated at a configured interval (daily, monthly, yearly etc.) on a configured collect day. For each participant it displays a summary per day of the applied rates, charges (including one off charges), counts and amounts, followed by the grand total for the billing period. One off charges are displayed in the invoice report similarly to other rates, but the rate name is a fixed text “One-off charge”. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information. In case of interchange rates being defined in the system then an additional set of reports is generated (one for operator and an individual report for each participant) with the invoice for interchange fees. Report visualization based on participant types: • IPS: • Direct settlement participants – see owned reports with details about their data and see indirect settlement participant reports as well • Indirect settlement participants – see owned reports with their data only • Direct clearing participants – see owned reports with their data only • Indirect clearing participants – see owned reports with their data only • Proxy • Direct settlement participants – see owned reports with details about their data and see indirect settlement participant reports as well • Indirect settlement participants – see owned reports with their data only
Generation	Automatically, at the end of the banking day (depending on system parameter; once per week, month etc.)
Filters	Participant, Business Day

Displayed details	• Rate name • Participant name and BIC • Transaction type • Unit charge • Quantity (billed count) • Amount (based on unit charge and quantity) • Premium • Charge (total billed amount for a specific rate) • Total amount and count per invoice period
-------------------	---

2.3. Current Balance Report

Name Current Balance Report

Description	This report presents a snapshot of each participant's IPS technical account balance in IPS. Information included contains current position, current available amount, current HOLD debit/credit amount, total debit amount for current business day, total credit amount for current business day. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information. The direct settlement participants will also see the balances of their indirect settlement participants.
Generation	Automatically, at the end of day. On demand.
Filters	Participant
Displayed details	• Participant name and BIC • Available amount • Hold debit/credit • Current balance • Total credit/debit for current business day

- Business day opening balance
- Business day closing balance (only for end of day reports). Business day closing balance will only be displayed for end-of-day reports, since that information is not available for on-demand reports during the day.

2.4. Liquidity Adjustment Report

Name **Liquidity Adjustment Report**

Description	This is an automatic report generated at the end of day or on-demand. The report includes information about all liquidity adjustment operations: automatic liquidity adjustment events, manual fund/release and pacs.009 transactions used by participants to borrow liquidity. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	Automatically, at the end of the banking day On demand
Filters	Business date Participant
Displayed details (as separate tables)	Liquidity Adjustment(s) • Liquidity adjustment event name and timestamp • Participant BIC • Low limit • High limit • Base balance • Balance before event • Adjustment from event • Status of event Manual Fund/Release

	• Participant BIC • Amount • Reference of fund operation • Response from RTGS • Contingency flag (whether the operation was closed through the contingency flow)
	Liquidity Borrowing • Participant BIC from • Participant BIC to • Amount • Transaction reference
	Total Liquidity Changes • Participant BIC • Total credits • Total debits • Adjustment

2.5. Request to Pay Report

Name Request to Pay Report

Description	This is an automatic report generated at the end of day or on-demand. The report includes information about the request to pay statuses (not paid, paid, paid partially), number of incoming and outgoing and the amount of the incoming and outgoing request to pay flows. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	Automatically, at the end of the banking day On demand
Filters	Business date

	Participant
Displayed details (as separate tables)	- Participant RTP Priority Status (High/Norm) → High: ○ NOT_PAID: Outgoing (Count, Amount) + Incoming (Count + Amount) PAID: Outgoing (Count, Amount) + Incoming (Count + Amount) ○ Total High: Outgoing (Count, Amount) + Incoming (Count + Amount) → Norm: ○ NOT_PAID: Outgoing (Count, Amount) + Incoming (Count + Amount) ○ PAID_PARTIAL: Outgoing (Count, Amount) + Incoming (Count + Amount) ○ PAID: Outgoing (Count, Amount) + Incoming (Count + Amount) ○ Total Norm: Outgoing (Count, Amount) + Incoming (Count + Amount) → Total Participant 1..n - Total RTP Priority, Message Type / Status → High: ○ NOT_PAID: Count, Amount ○ PAID: Count, Amount ○ Total High: Count, Amount → Norm: ○ NOT_PAID: Count, Amount ○ PAID: Count, Amount ○ PAID_PARTIAL: Count, Amount ○ Total Norm: Count, Amount

3. Proxy Reports

3.1. Proxy Usage Report

Name	Proxy usage report
Description	This report contains a summary of all proxy service operations for each proxy enabled participant. The information displayed is the type of operation: either a write (register/update/remove) operation or a read (inquiry/lookup/reachability check/verification of payee/account possession check) operation. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	On demand
Filters	Participant name, time interval
Displayed details	• Participant name (BIC) • Operation(there can be multiple operations in a bulk message) • Message type • For both messages and operations: Count (Total, Complete, Rejected, Partial with status code if exists)

3.2. Proxy Transaction Report

Name	Proxy transaction report
Description	This is a daily report over proxy activities: registration, deletion, containing information about the attribute, value before update and value after update, generated for each proxy enabled participant. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information. The system segregates the presented data for participants that have access to proxy. The operator has the option to see all reports and a consolidated view of all data.
Generation	Generated automatically at the end of business day (or a custom timestamp)

Filters	Participant name, business day
Displayed details	• Participant name + BIC • Operation • Message ID • Operation ID • Attribute name • Before value • After value • User (in case of manual updates) • Timestamp

3.3. Proxy Yearly Report

Name Proxy yearly report

Description	This is a daily report on proxy registrations that acts as a notification for the participants to check for stale data. It contains information about all proxy identifiers that were registered, updated, or last reported on the date that is a number of days in the past (i.e., 1 year – 40 days). The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	Generated automatically at the end of business day
Filters	Participant name, business day
Displayed details	• Participant name + BIC • Proxy identifier type • Proxy identifier value • Registration date • Last modified date

4. Dispute Report

Name	Dispute Report
Description	This report contains a listing of all disputes segregated by participant. The report is generated in two versions: one for the operator with all participant information and an individual report for each participant with the filtered information.
Generation	On demand, automatically at the end of business day
Filters	Participant, business day
Displayed details	A header with the summarized count for each of the dispute statuses: ACCEPT, OPEN, REJECT Listing with the following details for each dispute in category: • Participant name + BIC • Dispute Status (Accept/Open/Reject) • Status (Active, Approve, Closed) • Claim Status (SENT/SETTLED) • Registration date • Open dispute processing days • Sender / Receiver • Priority in escalation matrix • Level in escalation matrix • Dispute category (system) • Profile assigned from sender/receiver • Currency • Dispute Creation Date • Dispute Closure Date • Error Type • Error By • Dispute Number

- Transaction Date
- Transaction Reference
- Overdue
- Arbitration

A footer with summarized information about the specific status:

ACCEPT – total settled claim amount

OPEN – n/a

REJECT – count for each “error type” / “error by”, count for disputes which reached the timeline
